35-45kg	£359.59
45-55kg	£390.00

Dental Treatment this can be hard to accurately estimate before an anaesthetic as not all dental disease can be identified on a conscious animal and it can vary with the difficulty of each tooth extraction. This will vary from very badly effected tooth roots that are extracted easily to other damaged teeth that need intricate surgical extraction. In cats we always recommend full mouth dental xrays to assess the tooth roots because this will show tooth disease under the gums and affect how we extract these teeth.

Dog Dental - for general anaesthetic, scale and polish £251.02

With major dental surgery on top of dental clean, including local anaesthetic, consumable and x-rays – up to £791.27
